Evan Chen (April 30, 2014) A Brief Introduction to Olympiad Inequalities Example 1.2 Prove that $a^2 + b^2 + c^2 \geq ab + bc + ca$ and $a^4 + b^4 + c^4 \geq a^2bc + b^2ca + c^2ab$. Proof. By AM-GM, $a^2 + b^2 \geq 2ab$ and $2a^4 + b^4 + c^4 \geq 4a^2bc$: Similarly, $b^2 + c^2 \geq 2bc$ and $2b^4 + c^4 + a^4 \geq 4b^2ca$: $c^2 + a^2 \geq 2ca$ and $2c^4 + a^4 + b^4 \geq 4c^2ab$: Summing the above statements gives $a^2 + b^2 + c^2 \geq ab + bc + ca$ and $a^4 + b^4 + c^4 \geq a^2bc + b^2ca + c^2ab$:

SparkNotes: Inequalities: Introduction and Summary

Introduction to Inequalities. Students learn that an inequality is a mathematical sentence that states that two expressions are not equal. For example, $x < 9$, which is read, "x is less than 9", means that any number less than 9 is a solution to the inequality. So 8, 7, 5.9, 0, and 10 are all solutions to $x < 9$.

Introduction to Inequalities

The purpose of an inequality is to compare two numbers or sets of numbers to see which is less than and which is greater than the other number. Solving inequalities is as simple as solving both sides of a problem, in the end you just have to look at two numbers and see which one is bigger and which is smaller.

Inequalities in one variable are introduced in algebra I; in algebra II, we turn our attention to inequalities in two variables. The first section explains how to graph an inequality on the xy-plane. Graphing an inequality in 2 dimensional space (a graph with 2 variables) is similar to graphing an inequality on the number line.
