In ring theory and related areas of mathematics a central simple algebra over a field *K* is a finite-dimensional associative algebra *A*, which is simple, and for which the center is exactly *K*. As an example, note that any simple algebra is a central simple algebra over its center. For example, the complex numbers *C* form a CSA over themselves, but not over the real numbers *R*. The quaternions *H* form a 4-dimensional CSA over *R*, and in fact represent the only non-trivial element of the Brauer group of
