Biologising Of Childhood Developmental Psychology

Originally published in 1990, this book looks at the history of developmental psychology in order to locate and evaluate the role played by biology in its most influential formulations. First Charles Darwin's own writings on child development are examined. It is shown that Darwin endorsed such ideas as the 'recapitulation' of evolutionary ancestry in the developing child, even though ...

Growth and Development in a Child | Psychology

Developmental psychology is the scientific study of how and why human beings change over the course of their life. Originally concerned with infants and children, the field has expanded to include adolescence, adult development, aging, and the entire lifespan. Developmental psychologists aim to explain how thinking, feeling, and behaviors change throughout life.
