Enhanced External Counterpulsation Therapy for Heart Disease

Enhanced external counterpulsation (EECP) is a noninvasive procedure in which a set of inflatable cuffs (similar to blood pressure cuffs) mechanically compress the blood vessels in your lower limbs. This increases the blood flow and oxygen back to the heart, reducing the work that the heart has to do.

Enhanced External Counterpulsation | Cleveland Clinic

Enhanced External Counter Pulsation (EECP) is performed as a non-invasive treatment to lower the number and intensity of angina episodes. Treatment is administered through three pairs of external inflatable cuffs that are applied around the lower legs, upper legs and buttocks.

EECP Treatment Centers - EECP Therapy

Enhanced external counterpulsation (EECP) is a noninvasive treatment used to augment diastolic pressure, decrease left ventricular afterload, and increase venous return. EECP has been studied

Enhanced External Counterpulsation Therapy (EECP)

Enhanced external counterpulsation (known as EECP) may be an option to relieve your angina when all other treatments have failed or aren't right for you. It can help your blood vessels make a natural bypass around narrowed or blocked arteries that cause your chest pain.

Enhanced External Counterpulsation (EECP)

For these patients with medically refractory angina pectoris, enhanced external counter pulsation (EECP) is the only truly noninvasive and unique treatment for which a reduction of angina symptoms and nitrate usage, increased exercise tolerance, and an improvement in myocardial ischemia.

How Does EEP Treat Chronic Angina?

Counterpulsation is also know as External Counterpulsation (ECP), and External Enhanced Counterpulsation® (EECP). Counterpulsation improves cardiovascular function and can be used to treat angina, microvascular angina and heart failure.

Home | Counterpulsation Treatment

Enhanced external counterpulsation (EECP) is an effective adjunct to or primary therapy for heart disease, and may benefit a number of other conditions as well, including hypertension and diabetes A principal benefit of this treatment is that rather than surgically grafting one or more vessels, EECP allows your body to create a multitude of blood vessels without surgical intervention

External Counterpulsation - Mayo Clinic Health System

A set of cuffs is wrapped around the legs and attached to air hoses that gently but firmly inflate and deflate the cuffs to increase blood flow to your heart. EECP Treatment Patients experience a sensation of pressure moving upward from calves to thighs to buttocks followed by the rapid release of pressure.

EECP (Enhanced External Counter Pulsation) Treatment

Enhanced external counterpulsation is a treatment for people who have coronary artery disease but can't have standard treatments like bypass surgery.

The Role of Enhanced External Counter Pulsation Therapy In ...

Enhanced External Counterpulsation (EECP) In-Stent Restenosis: Doctors Who Treat. Total Coronary Occlusions. Cleveland Clinic is a non-profit academic medical center. Advertising on our site helps support our mission. We do not endorse non-Cleveland Clinic products or services.

Enhanced External Counter Pulsation The

Enhanced External Counterpulsation (EECP) may stimulate the openings or formation of collaterals (small branches of blood vessels) to create a natural bypass around narrowed or blocked arteries. Who is a candidate for EECP? You may be a candidate if you: Have chronic stable angina; Are not receiving adequate relief from angina by taking nitrates

EECP Treatment Advantages and Disadvantages

External counterpulsation was used in the United States to treat cardiogenic shock after acute myocardial infarction. (9:10) More recently, an enhanced version namely "enhanced external counterpulsation" (EECP) was introduced as a noninvasive procedure for outpatient treatment of patients with severe, uncontrollable cardiac ischemia. EECP is said to increase coronary perfusion pressure and reduce the myocardial oxygen demand.

External counterpulsation - Wikipedia

Enhanced external counterpulsation (EECP) has been approved by the United States Food and Drug Administration (FDA) for management of refractory angina (Class IIb). EECP uses three sets of pneumatic cuffs that sequentially contract during diastole, increasing aortic diastolic pressure, augmenting coronary blood flow and central venous return.

Enhanced External Counterpulsation | Ohio State Medical Center

External Counterpulsation More than 6 million Americans suffer from angina , or chest pain, with as many as 350,000 new cases per year. As the group of people with heart disease increases, so does the group of patients who do not achieve complete relief of their angina despite current aggressive therapies, such as angioplasty and bypass surgery.

Enhanced External Counter Pulsation (EECP) - v-wellness.com

Enhanced External Counterpulsation (EECP) Enhanced external counterpulsation is a noninvasive method of improving blood flow to the heart and reducing anginal symptoms. This treatment involves repetitive leg compressions with a pneumatic device that drives blood backward into the aorta and increases coronary blood flow.

Corporate Medical Policy

EECP (Enhanced External Counter Pulsation) is an alternative treatment to improve blood circulation, thereby increasing the oxygenated blood supply through out our body. EECP helps reroute blood around narrowed or blocked arteries that are not supplying sufficient blood flow to the heart.
