Still, the easy stuff of the proof is the encoding of mathematical statements by prime number factorization and the general idea that the proof is premised on the liar's paradox.

Incompleteness: The Proof and Paradox of Kurt Gödel. "The genius behind this discovery was Kurt Godel, himself a man of paradox. He was the greatest logician since Aristotle, as well as Einstein's closest intellectual companion during Einstein's last years.

G del's Incompleteness Theorem, which proved that no formal mathematical system can demonstrate every mathematical truth, is a landmark of modern thought. It's a simple but profound statement, but the technicalities of G del's proof are forbidding.

### **INCOMPLETENESS: The Proof and Paradox of Kurt Godel, Dr. Rebecca Goldstein, Harvard**

Kurt Gödel is considered the greatest logician since Aristotle. His monumental theorem of incompleteness demonstrated that in every formal system of arithmetic there are true statements that nevertheless cannot be proved. The result was an upheaval that spread far beyond mathematics, challenging conceptions of the nature of the mind.

### **'Incompleteness': Waiting for Gödel - The New York Times**

Gödel's incompleteness theorems are two theorems of mathematical logic that demonstrate the inherent limitations of every formal axiomatic system capable of modelling basic arithmetic. These results, published by Kurt Gödel in 1931, are important both in mathematical logic and in the philosophy of mathematics.

INCOMPLETENESS is an excellent book about an intellectually elusive subject. Kurt Godel's fame was established by his proof of something called "the Incompleteness Theorem." His proof employed formal logic to establish a basic truth about mathematics. Namely, that in closed systems, there will be true statements that cannot be proved.

In particular, the article suggests that in constructivist logic and information theory, the temporal gap between truth and proof, between input and output, can be taken to argue that the means of thought expose the indetermination or the incomputability of proof.
