### REVIEW: Polynomial Operations M B T P C

When we are adding or subtracting 2 or more polynomials, we have to first group the same variables (arguments) that have the same degrees and then add or subtract them. For example, if we have  $ax^3$  in one polynomial (where a is some real number), we have to group it with  $bx^3$  from the other polynomial (where b is also some real number). ). Here is one example with adding polynomials
