The 50 percent of the sun's radiation that reaches the Earth is converted into infrared radiation, or heat. Clouds and greenhouse gases — atmospheric components such as water vapor and carbon dioxide (CO₂) — absorb the heat reflected by the Earth and radiate it back again so that a balance is created.

World Geography - Chapter 9 Flashcards | Quizlet

With 107 million people, Mexico is the world's most populous Spanish-speaking country. A population density of 142 people per square mile (54 per sq. km) suggests a relatively uncrowded country. This figure is only an average, however. In Mexico City, more than 19 million people live within an area of 597 square miles (1,547 sq. km).
